Artificial Intelligence Basics

Introduction to AI Fundamentals

What is Artificial Intelligence?

- Definition of AI
- History of AI development
- Types of AI: narrow and general

Machine Learning Overview

- Supervised and unsupervised learning
- Neural networks and deep learning
- Applications of machine learning

AI Applications and Uses

- Virtual assistants and chatbots
- Image and speech recognition
- Predictive analytics and decision-making

AI and Robotics

- Robotics and automation
- Computer vision and sensing
- Human-robot interaction

Natural Language Processing

- Text analysis and processing
- Sentiment analysis and opinion mining
- Language generation and translation

Ethics and Safety in AI

- Bias and fairness in AI systems
- Data privacy and security
- Accountability and transparency

Future of Artificial Intelligence

- Emerging trends and technologies
- Potential risks and challenges
- Future applications and opportunities
